## Conference on Durable Concrete for Infrastructure under Severe Conditions

in the framework of the LORCENIS project  
10-11 September 2019  
Ghent, Belgium

September 17, 2019

### @ the LORCENIS Conference on Durable Concrete

Last week ChemStream participated in the LORCENIS conference on sustainable concrete in the beautiful city of Ghent.

It was a 2-day conference that is part of the dissemination programme of the [European LORCENIS project](#) (Horizon2020), in which [ChemStream developed super-absorbent polymers \(SAPs\)](#) as additives to stimulate the self-healing properties of the concrete.

At the conference ChemStream had a stand and Els Mannekens gave a lecture on the development of SAPs for incorporation in concrete (for a summary [click here](#)).
